API Shipping Reference Data Version History

Change description	
Initial Creation of API Shipping V4 Reference Data file	
Enhancements updated, removed tabs related to errors, postcode format removed	
Completed Summary and Glossary	
Countries tab replaced by Reference Data tab	
Peer reviewed and approved	
	_

Sur
This document should be read in conjunction with the API Shippin
For API calls technical information, use the API Shipping V4 Swagg

Description

Used in Create Shipment call. This worksheet provides details of service codes / formats and available enhancements currently in use for Domestic shipments. This table lists all the service codes that were valid at the time of writing. Note that new service offerings are added regularly and this data can be out of date.

Used in Create Shipment call. This worksheet provides details of service codes / formats and available enhancements currently in use for International shipments. This table lists all the service codes that were valid at the time of writing. Note that new service offerings are added regularly and this data can be out of date.

Details of the Service Enhancement values used in the CreateShipment.

CarrierSpecifics.ServiceEnhancements element.

Reference data for Countries, Currencies and Times Zones

An explanation of useful jargon used in API Integration

Signature available for relevant services

Local Collect Enhancement, Available for Domestic Special Delivery and Domestic Tracked services only. Returns an error if requested and the service does not allow it.

Tracking Notifications Enhancement Available for Domestic Special Delivery and Domestic Tracked services only. Returns an error if requested and the service does not allow it.

Tracking Notifications Enhancement Available for Domestic Special Delivery and Domestic Tracked services only. Returns an error if requested and the service does not allow it. it is now available as an option on some International Services. Please Check Service Matrix Tab for list of Services enabled with this enhancement.

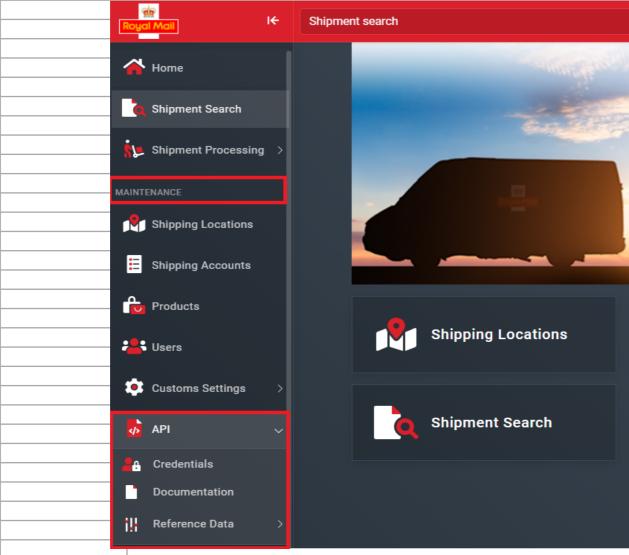

SafeplaceLocation paramater required - Max 30 characters. The safeplace location the shipment will be delivered to.

Recipient Email for E-Customs

Recipient Phone for E-Customs

Place Enhancements wherever applicable should not be selected together in the API Request

Description
List of all countries available on the system. Information about country name, ISO Alpha-2 and Alpha-3 country code, country group, and further details are returned in the response.
List of all currencies available on the system. Information about currency name and code is returned in the response.
List of all time zones available on the system. Information about time zone name, UTC offset and country is returned in the response.
Also available through Pro Shipping Portal > Maintenance > API > Reference Data

GLOSSARY

A set of functions and procedures allowing the creation of applications that access the features or data of an operating sy application, or other service.

An API call, or API request, is a message sent to a server asking an API to provide a service or information.

Authentication means confirming your own identity

Authorization means granting access to the system

The cleansweep is an automatic manifesting process which picks up any Printed shipments with a shipment date of the particular Clean Sweep Date. The clean sweep was introduced for revenue protection only and should not replace your eday manifesting process.

This should be created on the Proshipping Portal. It is an essential security parameter to use the API

This should be created on the Proshipping Portal. It is an essential security parameter to use the API

It is the portal to manage all the Shipment related activities e.g. Viewing shipments, Manifesting. URL: https://royalmail.proshipping.net/

Representational State Transfer (REST) is a style of defining required constraints for creation of Web Services

These are the codes required while making a /shipments Request. Each code is associated with the Services that Royal Ma Offers to its customers. e.g. Special Delivery Guaranteed by 1pm (£750) - SD1, Royal Mail Tracked 48 - TPS, International Business Mail Tracked - MPL etc.

Service Format is used to declare the type of item present in shipment request. It can be Letter, Large Letter, Parcel or Prin Paper.

Service Level is associated with Service Codes, Each Service Code has atleast 1 service level associated with it. Customers have multiple Service Levels for a specific type of service which can then be used for creating labels for different type of I For Example, CRL1 with Service Level 1 can be used for Letters between weight 0-100g and CRL1 with Service Level 2 can used for letter between weight 101-250g

Shipper Department Code. For Royal Mail shipments, this code must be a valid 10-digit OBA department code.
